Subject: Fw: Animas Combined Project

FYI, I spoke to Joe last night about Janine/Weston's request for a combined project for Gold King. There are 6 Gold King Scribe projects. Two each for Regions 6,8,9 that consist of a sampling and analytical project. Users of the combined Scribe project will include the response's Environmental Units. Currently there are Environmental Units for each region. I believe Weston may also use the combined Scribe.NET PID to report off. Later, the combined project may be made available to HQ and other organizations (state, etc..).

Once we get things setup, Weston will be managing the combo project. Later today we will be setting Janine up with the Combo subscription and instructions including the database MaxLocks Registry settings. We have also created a password protected Gold King Publication account to Publish the project to.

Melissa, when you get a chance, I'd like to talk with you about best practices for the combo project. Things like what Custom Data Views (if any) we should have in the project, Publishing instructions, etc.. Also, Auditor rules for checking the project before publishing may also be developed at a later time.

Thanks,

Frank

That's how we roll in R6

Welcome back Mel!

Where is ERMA

>>> Janine,
>>>
>>> I spoke with Frank and we are good to go on the combined project. My recommendation is to give
him a heads up on when you plan on doing the combine tomorrow and try to be on the phone with him to
go through the process. there are also a couple of settings he wants to make sure are applied on the
publishing machine.
>>>
>>> As we discussed this is going to be a straight combine of all the EPA projects. So the prelim lab data
that is loaded in the r8 analytical project will be in the combined project as well.
>>>
>>> If the need emerges to scrub out the prelim data in a version of the combined project because the
scribe project is being distributed outside the response then we will need to sit down and discuss the
mechanics of how to do that. It's not a process we want to implement on the fly and definitely ratchets up
the complexity of the subscribe and publish model.
>>>
>>> Also I'll take this as an opportunity to plug for getting that data QC resource in place that could run
auditor rules on the combined project prior to publishing to ensure all the data is looking good.
